

Virtual course on “WORKING WITH THE LEARNING OUTCOMES APPROACH IN PRACTICE”

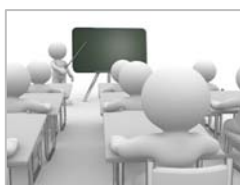

Start: next start possible as of July 2014 at any time

Language: EN and DE (as of October 2014)

COURSE DESCRIPTION

Learning outcomes orientation is the leading concept of European vocational education and training instruments such as the European Qualifications Framework (EQF) and the European Credit System for Vocational Education and Training (ECVET). The learning outcomes approach is meant to build the basis for transparency and comparability of qualifications and learning across borders and institutions. But the implementation of the learning outcomes approach is not only necessary in order to realise the implementation of these European VET instruments. It is also an opportunity and a challenge for VET praxis all over Europe because it requires a rethinking of VET praxis within VET providers, public bodies and industry involved into the implementation of VET.

This course intends to enable you to adapt your very own daily training praxis to European standards and in this way to make your training praxis ready for the implementation of EQF and ECVET. But learning outcomes orientation also aims to improve quality of vocational training as well as the attractiveness of vocational training programmes. The course, therefore, addresses not only the pure practical realisation of European instruments but provides you with opportunities and tools to increase quality of your VET courses and programmes and to make them more attractive for learners due to increased quality and a European dimension.

YOUR TUTOR

The course is tutored by Claudia Ball (DEKRA Akademie GmbH, DE). Claudia works since more than 10 years within European education policy topics.

She has her professional background in education science and training psychology and works as researcher and project manager within European VET projects at DEKRA Akademie (DE).

TARGET GROUP

The course is primarily addressed to those already working within vocational education and training and applying the learning outcomes approach to teaching and training praxis. This includes trainers, teachers and education managers at private and public VET providers and industry but also members of staff within competent bodies and social partner organisations involved into the implementation of vocational education such as actual training praxis as well as assessment and quality assurance being affected by the LO approach.

SETUP OF THE COURSE

The course leads you through a row of learning sequences. Each of these sequences provides you with learning material and a learning task. These learning tasks are directly related to your daily work within education and training.
